**(1)** Figures from Alan Guttmacher Institute. **(2)** Figures from U.S. Census. **(3)** Figures for pregnancies are calculated by dividing the abortions by the abortion percentage. **(4)** A zero (0) in this column indicates no data is available from Center For Disease Control (CDC) Atlanta. Many states do not submit data even when CDC requests it. The purpose for these four columns is to document the trends in the racial distribution of abortions.

\* These figures are included in the totals for New York State. These figures total 67,190. Of that figure 43.2% are black babies, 32.1% are Hispanic babies, 14% are white babies, and 10.7% fall into the other category. Why are the black and Hispanic rates so high?!? # These figures total 361,591 abortions. These figures only include 39% of the total abortions (926,240) that were reported by the Guttmacher Institute in 2013. \*\* As of 2014 the Center for Disease Control (CDC) is no longer collecting abortion statistics. Why?

The state of California murders more unborn babies every year than any state in the United States. # Projected by the National Right To Life Committee.
